Surveys & Forms Module

DRP board task: Build, Send, Track and Analyze surveys inside the DeepRoots Portal

Phase	Later phase: 3, 4 or 5 (Todd to place)
Requested by	Troy Winkler
Users	Customer Service and Marketing staff (internal only)
Date	November 11, 2026

Goal

Build a module in the DeepRoots Portal (DRP) that lets Customer Service and Marketing create surveys and forms, send them to customers and prospects, collect the replies, and analyze the results, all inside the portal on the deeprootsbible.com domain. This replaces Google Forms, Sheets and Drive for surveys. The results feed directly into curriculum design and editing for future releases (for example the middle-school interviews and the Grade 7 teacher feedback survey).

> **Data rule:** Salesforce is being ramped down. The portal is the **only** system of record. Contacts, prospects, recipient lists, surveys and responses are all stored in the portal database. No Salesforce sync. No outside analytics or AI services.

1. Survey Builder

- Create, edit, duplicate, archive and delete surveys and forms.
- Question types: multiple choice (one answer), checkboxes (many answers), dropdown, yes/no, rating scale (1–5 / 1–10), Net Promoter Score (0–10), short text, long text, date, number, email, phone.
- Sections or pages, required questions, help text under a question, and an optional "Other (please specify)".
- Skip logic: show or hide a question or section based on an earlier answer.
- Templates: save any survey as a template, and start a new survey from a template or a past survey.
- Tag each survey with a category (Curriculum Feedback, Customer Satisfaction, Event / Convention, Interest / Lead, Training, Other) and optionally a product or grade (PreK, K–5, Grade 6, 7, 8).
- DeepRoots branding: logo, colors, thank-you message, and an optional redirect URL when done.
- Preview as the respondent on desktop and phone before sending.
- Draft / Scheduled / Open / Closed status. Optional close date or response limit.

2. Audience / Recipients

- Choose recipients from the portal's own records: customers (schools, school admins, teachers) and the prospect database.

- Filters: customer vs. prospect, school, school type (Christian school, homeschool, church, international), state/region, grades and products used, renewal status / renewal date, role (head of school, admin, curriculum director, teacher), sales ambassador / territory, and whether they answered an earlier survey.
- Save filtered lists as reusable audiences that update as records change.
- Upload a one-off CSV list; new people are added as portal prospect records, with duplicate checks by email.
- Always leave out unsubscribed or bounced contacts. Show the final count before sending.

3. Sending / Distribution

- Email from the deeprootsbible.com domain (properly authenticated so it reaches the inbox). Use the same sending setup as the portal's marketing module.
- Editable email subject and body with merge fields (first name, school name, grade).
- A unique personal link for each recipient, so responses tie back to the contact automatically with no login needed.
- Send now or schedule. Automatic reminders to non-responders (for example after 3 and 7 days), with an editable cap.
- One-click unsubscribe in every email, honored across the portal.
- Other ways to share: a public link and a downloadable QR code (conventions, website, printed materials), an embed code for the website, and in-portal display to signed-in teachers and admins (banner or dashboard card).
- Optional anonymous mode: responses are not tied to a contact.

4. Collecting and Tracking Responses

- All responses are stored in the portal database. Nothing goes to Google Drive.
- Each response is linked to the contact and school record (unless anonymous). On a contact's or school's page, show every survey they have answered.
- Partial responses are saved; respondents can come back and finish through their link.
- Live dashboard for each survey: sent, delivered, opened, started, completed, bounced, unsubscribed, response rate, and average time to complete.
- Response list with search and filters, plus a view of each individual response.
- Notify the survey owner (email or portal notification) on new responses, or a daily summary.
- Hidden fields for tracking where someone came from (for example the convention name or campaign).

5. Analysis (Built into the Portal)

- Automatic charts for each question: bar, pie, rating average and distribution, and NPS score. They update live.
- Filter all results by any recipient attribute (customer vs. prospect, grade, product, school type, state, role) and by date.
- Cross-tab: compare answers to one question broken out by another question or by a contact attribute.

- Compare surveys over time when the same template was sent more than once (for example this year vs. last year).
- **AI analysis of written answers**, running inside the portal with no outside tools:
  - Summarize the main themes, with how often each comes up and example quotes.
  - Overall tone (positive / neutral / negative) for each question and each response.
  - "Ask the data": staff type a question in plain English (for example "What do Grade 7 teachers say about the assessments?") and get an answer that names the responses it used.
  - Flag responses that need follow-up (complaints, cancellation risk, requests for contact) for Customer Service.
  - Staff only. Never shown to schools. Follows the same role rules as the internal side of the Rooted Helper / Moses.
- A "Curriculum Insights" view: pull feedback from all curriculum surveys together by grade and unit, for the curriculum team.
- Save filtered views, and share a read-only results link with other staff.
- Export to CSV / Excel and a PDF summary report, as a backup and for sharing.

6. Permissions and Privacy

- Staff only. Roles: **Survey Admin** (everything), **Builder** (Customer Service and Marketing: create, send, analyze), **Viewer** (read-only results, e.g. Curriculum team, leadership).
- Schools, teachers and students never see the builder or other people's results.
- Audit log: who created, edited, sent or exported each survey.
- Respondent data follows the DR Privacy Statement. Include a consent / privacy note on each survey. Support deleting a person's responses on request.
- No student data is collected through this module unless approved separately.

7. Acceptance Criteria

1. A Marketing user can build a 10-question survey with skip logic, pick a saved audience of prospects in Grade 6–8, schedule the send, and see it arrive from an @deeprootsbible.com address.
2. Reminders go only to people who haven't completed it, and unsubscribed contacts never receive it.
3. A response submitted through a personal link shows up on that contact's portal record within a minute.
4. The results dashboard shows correct counts and charts, and filters work by customer vs. prospect and by grade.
5. The AI summary of written answers lists themes with example quotes. "Ask the data" answers name the responses used.
6. A school admin or teacher account cannot reach any survey builder or results screen.
7. CSV export matches the on-screen data.
8. No survey data is written to Google Drive, Salesforce or any third-party analytics or AI service.

8. Not in Scope (For Now)

- Paid / payment forms.

- Student-facing quizzes or assessments (those stay in the learning platform).
- SMS distribution (possible later).

9. Open Questions for Todd

1. Which phase (3, 4 or 5), and rough effort?
2. Can survey emails share the portal marketing module's sending setup and unsubscribe list?
3. Which AI model / setup is used inside the portal for the analysis features, and does it match the Rooted Helper / Moses setup?
4. Migration: should past survey results (Google Forms / Sheets, e.g. the Interview Q&A and G7 feedback) be imported into the portal?
